Dear Mr. Sir,

Thank you for the opportunity to participate in your mining projects and endeavors as a Technical Advisor. After a couple of field trips observing and evaluating your projects in Mexico, they do appear to have significant potential to become profitable mining operations with growth potential once you have finished constructing the appropriate physical extraction plants and established the proper extraction protocols for the ore.

Sincerely,

ROBERT B. GARCIA, PRESIDENT
AURIC METALLURGICAL RESOURCES

PROFILE OF ROBERT B. GARCIA

(CONDENSED)

Mr. Garcia has been a developer, owner and operator of numerous mines and mining companies, a precious metal refinery in Beatty, Nevada, and Auric Metallurgical Resources, a Wyoming Corporation involved in consulting for mining and precious metal industries.

The refining facility was developed in the course of his consulting work for various clients, involving the extraction of precious metal values from their concentrates. Mr. Garcia had previously put the Montgomery Shoshone Mine into operation in 1983. Once he developed and implemented extraction procedures for the ore, and the viability of the property. These procedures mainly centered around his development of cathionic/anionic polymers that enabled the precious metals to be extracted from the ore in an economical, profitable manner.

Mr. Garcia later joined with St. Joe American (one of the world's largest gold mining companies), a subsidiary of Fluor Corporation, to block out and develop the main ore body of 8 million tons on a large scale. The results of which are seen in the attached 1989 article in the California Mining Journal and brochure documenting history and current development of Bullfrog, Montgomery -Shoshone gold mine. This soon became the largest gold mine in Southern Nevada employing several hundred persons and having a major impact on the economy of the area.

Although Mr. Garcia's formal education at Arizona State University prepared him as a chemist, his vocational experience is mainly as a metallurgist. To his credit, Mr. Garcia has developed enhanced extraction procedures for various ores including improved oxidation and cyanide vat leaches, increased concentrates extraction's by ozonation of ore while in a chlorinated state, complex sulfide and brominated ore extraction's and cathionic and anionic polymer flocculants. Mr. Garcia has been assisting P.T.I. , Ortech and similar mining companies in the development of their new and innovative recovery processes.

Mr. Garcia also consults within the mining industry as an expert witness in court litigation's and private parties, has served as an assay referee in large bulk precious metals purchases, evaluated precious metals for personal and corporate purchases and performs metallurgical evaluations of mine properties for ore values and extraction procedures.

Mr. Garcia's has been directly involved or consulted in numerous projects in Africa, mainly in Ivory Coast, Guinea and Mali. In Mali plans and permitting for a Gold Refinery and smelting facilities are in the final stages. All plans, chemical procedures, plant construction and ecological parameters are now in the approval process. In Guinea, Mr. Garcia evaluates major gold purchases for banking entities, and in the Ivory Coast and Ghana, Mr. Garcia has been involved in bulk gold purchases.

Also in Ghana, under the request of Pres. Rawlings, Mr. Garcia was instrumental in establishing assaying protocols for the PMMC and developing procedures to reduce the illegal mining and export of precious metals that were often going to terrorist groups and activities not beneficial to Ghana or in adverse standings to normal world ethical procedures. This is to include consulting with gold purchases in many countries throughout Africa to assure these purchases complied with all regulatory authorities.

Mr. Garcia for many years has also had a direct involvement in the Philippines for the recovery/evaluation of Japanese war treasures and Pres. Marco's reputed gold backed bank assets throughout the world identified in Operation Domino. He was directly appointed by President Fidel Ramos under Presidential Decree 1726 – A and authorized under the PCGG (Presidential Commission on Good Government).

Of particular interest is Mr. Garcia's appointment to purchase gold and precious metal products for banking institutions and governmental authorities. These duties, responsibilities, experience and expertise cumulated in the appointment of Mr. Garcia to the Board of Directors of a Swiss Bullion License, duly appointed and registered with the Swiss Government. In addition, he has been certified as an expert witness for mining related matters in both state and federal courts and is a referee assayer for most of the world gold refineries. This also enables him to serve as a representative in the refinery for clients gold to ensure accurateness of assays and help in the prevention of oxidation melts losses.

Such responsibilities extended to the evaluation of gold stocks held or recovered in the Middle East during the Kuwait and the Iraq wars.

In the immediate future, Mr. Garcia has been appointed as head of the scientific team and laboratory in the recovery of several Spanish Galleons with significant treasure and archeological values. Having recently acquired all the rights and approvals of necessary government authorities the recovery project is scheduled to begin in April or May of next year. For documentary purposes, the project has already lifted several cannons with initial verification of cargo manifest. The project is also being sponsored and documented by the Discovery Channel and Canon cameras who are providing new photographic capabilities.

Recently, Mr. Garcia has been appointed as "Senior Bullion Officer" for GFI, a duly licensed, banking and financial institution registered in Mexico, with national jurisdiction under the governing laws of the Estados Unidos Mexicanos. GFI is currently in the process of establishing institutional operations and locations, with correspondent bank relationships to be able to provide a full range of multi-purpose financial services and resources to its customers.

Since much of Mr. Garcia's work and his clients are of a sensitive nature, Mr. Garcia will expand further on some of these situations in person if the subject is unclassified or already public knowledge.

Western Sierra Mining (WSRA) Is Now OTC Current and Investors Can Ac

Western Sierra Mining (OTC WSRA) is a publicly traded precious metals and minerals mining company. Incorporated in Utah in 1907, we have a heritage of over 100 years in gold and silver mining and exploration. The company has over 1100 shareholders with an active and independent six member Board of Directors presided over by a Chairman who is the former CFO for Nabisco Foods, European Division and a President with over 30 years experience in mining and running public companies.

Western Sierra is primarily a project development company capable of taking a potential target mining property from exploration to production either for our own account or as a joint venture partner or operations contractor for others.

We are dedicated to the creation of equity through the efficient extraction of gold, silver, and other metals and minerals at the lowest possible cost using all available technologies

Western Sierra Mining was founded on production and developmental mining projects historically in the Western United States and Mexico and continues that general philosophy today.

Please explore this site to learn more about our company and its operations, and feel free to contact us with any questions.

We have recently completed several acquisitions of mineral properties located in the Bradshaw Mountains of Arizona. They are: The Sun Gold Group, The Big Chief Group, The Oro Cache Mine, The Eagle Mine and The Treasure Gulch Mine. Total reported gold reserves for this group are approximately 500,000 oz of gold and 900,000 oz of silver as follows: 100,000 oz Au proven, 400,000 oz Au probable/indicated and 550,000 oz Ag proven and 350,000 oz Ag probable/indicated. These mines as well as others are available for sale or development through the establishment of Joint Venture relationships.

Western is continuing its exploration programs and anticipates acquiring several additional properties either for its own account or as a joint venture partner during the first quarter of 2011 and beyond.

In addition to our core mining and processing operations Western Sierra also provides a variety of services to the mining industry including project management, project certifications and evaluations, mine engineering and environmental permitting. In all aspects of our forward looking business plan we intend to rely on our guiding core philosophy of concentrating on low cost, potentially high profit margined operations to focus on the creation of equity for our shareholders

MANAGEMENT

Michael M. Chaffee, President, Director, CEO

Mr. Michael Chaffee is the President and C.E.O. of Western Sierra Mining. He has over 30 years of mining experience and extensive work history in the Senior Management of public companies, as well as tremendous education, certifications, and connections to draw upon for the benefit of Western Sierra's endeavors.

Mr. Chaffee was previously the President, C.E.O. and Chairman of Applied Biomedical Sciences; a public company of which he was a founding director. Prior to forming ABS, he held senior positions as Executive Vice President and C.O.O. of U.S. Pump and Turbine Company Inc., Vice President, Western Regional International as well as being a Senior Vice President in two local Investment Banking firms.

His Education includes a BS in Electronic Engineering at the Northrop Institute of Technology, 1964 and Post graduate Work, Electronics, Business Administration, Biomedical Engineering at the University of Southern California and the University of California at Los Angeles. Licenses and Certifications include I.E.E.E. Certification, U.S. Biomedical Engineering Certification, Principals License, New York Stock Exchange/NASD ,Captain's License , U.S. Coast Guard and Top Secret Clearance in conjunction with work on development of high altitude and near space reconnaissance systems.

Dennis Atkins, Chief Financial Officer, Director

Mr. Atkins is the Chief Financial Officer and a Director of Western Sierra Mining. He is a Certified Public Accountant with over fifteen years experience in public accounting, specializing in the audits of publicly traded companies. Mr. Atkins is a member of the American Institute of Certified Public Accountants and holds licenses in Oklahoma and California . His firm is a member of the Securities and Exchange Commission's practice Section of the American Institute of Certified Public Accountants. Mr. Atkins holds a Bachelors Degree in Accounting from Oklahoma State University and a Masters Degree in Accountancy from the University of Oklahoma .

Robert B. Garcia, Director, Technology Development

Mr. Garcia serves as a Director of Western Sierra, and spearheads technology development for the company. He has been a developer, owner and operator of numerous mines and mining companies, and actively consults for several mining and precious metal industries. His resume includes development of one of the largest gold mines in the State of Nevada , as well as experience purchasing gold and precious metal products for various banking institutions and governmental authorities.

EXCERPTS FROM GEMCO WEBSITE

Signing of Strategic Framework Alliance

On June operational

8th, and

executive officers of General Mining Concessions, LLC (Gemco) based in New York and Lima met with the Officers and board members of Fenamarpe, the Federation of Small Miners to sign a strategic framework alliance that will be the start of important cooperation between the federation and Gemco. The meeting took place in Fenamarpe's regional offices in Nazca, Peru. The alliance anticipates a joint venture in which Gemco will build, operate and own a number of regional refineries around Peru for the benefit of Fenamarpe's 350,000 members who will benefit through higher yields and transparency that has been lacking in other facilities. Gemco will also agree to stake claims in joint ownership with members of the federation for mineral and mining rights on sites that prove to present strong economic potential. This will provide Gemco with the opportunity for immediate and majority participation in high grade, high yield mining sites or concessions currently owned by the small miners who's concessions are being minimally worked for lack of capital and technology. This important relationship will provide serious improvement in the living and economic standards of the members of the federation. Gemco will provide modern technology and open market opportunities to members who will benefit through higher production volume and better pricing for their ores due to transactional transparency. The company has been in negotiations with Fenamarpe for a number of months and this accord represents a major step forward in our relationship with this important organization. Gemco has estimated that the full potential value of this opportunity is estimated to run into hundreds of millions of dollars.

For General Mining – Chairman – Norman Kalsh

Ivan Kerzner, Chief Executive Officer
Joseph Albino, Director of Operations
Robert Garcia, Director of Technical and Scientific Services

For Fenamarpe – President Teodulo Medibna

Hugo Ricardo Pacheco, Director Control
Rafael Semiuario Cordova, Director of Legal Issues
Americo Castillo Arteala, Director Coordination
David Copello Zeballos, Director of Acts and Files
Katharine Cespedes Talpe, Secretaria
Veronica Yoana Caceres, Secretari

It is important to note that although the Gemco Project never came to full fruition because of inadequate funding, Mr. Garcia was requested by the Federation of Small Miners to continue on a private basis to help organize and assist the association with technical expertise in the evaluation/assay of mining properties, extraction procedures and provide a fair market for their precious metal assets.

MINACALPA PERU

Also in Peru, Mr. Garcia was brought in to perform the evaluation, extraction procedures and environmental analysis for the at one time 2nd largest Au producer, Minacalpa for litigation in the Supreme Court.
